Miguel A. De Jesus Rosa

Gmail: themiguel10101@gmail.com — **Number**: 939-301-3880— **Github**: pologram1— **Linkedin**: www.linkedin.com/in/miguel-de-jesus-118569241— **Address:**Calle 8 F12 Brisas Del Mar Luquillo Puerto Rico

PROFESSIONAL SUMMARY

Final-year **Computer Engineering student** with experience in **Java, C++, Python, SQL, backend web development, databases, operating systems, and computer networks**. Experienced developing Java web applications, designing relational databases, debugging software systems, and applying object-oriented programming and data structures to engineering problems. Interested in **cloud computing, distributed backend systems, scalable services, and software engineering**. Bilingual in English and Spanish with strong problem-solving, communication, and teamwork skills.

EDUCATION

Bachelor of Science in Computer Engineering **Expected Graduation: 2027**
Ana G. Méndez University — Gurabo, Puerto Rico

Relevant Coursework: Data Structures & Algorithms, Operating Systems, Database Systems, Software Engineering, Telecommunications Networks & Security, Computer Architecture, Object-Oriented Programming, Microprocessors, Digital Logic, Artificial Intelligence, Machine Learning

TECHNICAL SKILLS

Languages:	Java, C++, Python, SQL, HTML, CSS, Excel VBA
Backend / Web:	Jakarta Servlets, JSP, Java web development, server-side application logic, authentication, role-based access control
Databases:	MySQL, relational database design, SQL queries, views, triggers, stored procedures, DAO pattern
Systems:	Operating systems, data structures & algorithms, computer networks, computer architecture, digital logic, debugging
Tools:	Git, Linux, Apache Tomcat, Visual Studio, Visual Studio Code, Microsoft Excel, Unity
Additional:	Object-oriented programming, software engineering, technical documentation, Artificial Intelligence, Machine Learning

TECHNICAL PROJECTS

MiniAmazon E-Commerce Backend Application — Academic Project

- Developed a Java-based e-commerce web application using **Jakarta Servlets, JSP, MySQL, HTML, CSS, and Apache Tomcat**.
- Implemented backend functionality for **user authentication, role-based access control, product management, shopping carts, and order processing**.
- Designed database interactions using Java classes and the **DAO pattern**, separating database operations from application and presentation logic to improve modularity and maintainability.
- Debugged servlet, JSP, database, and Tomcat deployment issues across the application stack and documented system architecture, database logic, and security decisions.

Database Management System — Academic Project

- Designed and implemented a relational database using **MySQL**, including tables, relationships, views, triggers, and stored procedures.
- Developed SQL operations for inserting, updating, deleting, filtering, retrieving, and analyzing relational data.
- Applied relational database concepts and demonstrated database functionality through technical explanations and command-line testing.

Casino Simulator with Banking System — Academic Project

- Developed a **Java-based simulation** containing an integrated banking system for account management, deposits, withdrawals, transactions, and balance tracking.
- Implemented game logic, random outcome generation, betting controls, balance validation, and user input validation.
- Applied **object-oriented programming, data structures, probability concepts, and modular software design** to organize application functionality.

AI Room Redesign & Architecture Visualization Prototype — Academic Project

- Designed a software prototype for an **AI-assisted room redesign and architecture visualization** application.
- Planned an image-based workflow for room input, spatial information, redesign generation, and user interaction.

- Explored **Unity, VR interaction, object manipulation, modular software components, and AI-assisted design workflows**.

PROFESSIONAL EXPERIENCE

Busser / Food Runner — Upscale Restaurant **Puerto Rico — 2026–Present**

- Support front-of-house operations in a fast-paced upscale restaurant, coordinating with servers, kitchen staff, and team members to maintain efficient and accurate service.
- Manage multiple priorities simultaneously while maintaining attention to detail, organization, and responsiveness during high-volume service.
- Provide professional guest-facing support and adapt quickly to changing operational needs, strengthening **communication, teamwork, time management, and problem-solving**.

TECHNICAL STRENGTHS

- Analyze and debug software by identifying logical, implementation, database, and deployment issues.
- Apply data structures, algorithms, object-oriented programming, and software engineering principles to academic software projects.
- Learn new development tools and technical concepts quickly and apply feedback to improve software solutions.
- Communicate technical concepts clearly in **English and Spanish** and collaborate effectively in academic and professional environments.
